SUMMARY

Backend-focused Software Engineer with 4 years of experience designing and building scalable REST APIs, microservices, and fullstack features in Python (Django) and JavaScript (React) for a production fintech platform. Experienced with asynchronous processing (Celery), relational database design, and end-to-end ownership of features — from requirements through deployment and production support. Has shipped LLM-powered features (GPT-4.1) to production and applies LLM APIs and prompt engineering in day-to-day development work. Comfortable working across the stack and collaborating with cross-functional teams in Agile environments.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Frameworks: Django, FastAPI, React, Frappe

Databases: MySQL, PostgreSQL, MariaDB (relational), Redis (non-relational)

APIs & Architecture: REST API Design, Microservices Architecture, Asynchronous Processing (Celery)

Cloud & DevOps: AWS, Docker, Git, CI/CD Workflows

AI/LLM Tools: LLM APIs (OpenAI GPT-4.1), Prompt Engineering, Tool/Function Calling

Core Concepts: OOP, SOLID Principles, System Design, Agile/Scrum, Data Structures & Algorithms

EXPERIENCE

Software Engineer

Nov 2022 – Present

Desiderata Impact Ventures Pvt. Ltd. (Progcap)

Delhi/Noida, India

Loan Management Platform

- Built an LLM-powered (GPT-4.1) pipeline to translate Post-Sanction (PS) Kit clauses into 12 vernacular Indian languages, in line with RBI guidelines, integrated into the Leegality e-signature workflow in production; engineered clause-aware chunking and retry logic to fix translation degradation in low-resource scripts (e.g., Gurmukhi), with versioned document storage and failure alerting.
- Designed scalable fintech microservices and REST APIs for loan origination, user access, and communication workflows.
- Built an agreement management module from scratch, automating document tracking and validation — reducing manual effort by 30%.
- Implemented asynchronous background processing via Celery for high-volume pipelines — cutting response times by 40%; engineered a notification service handling 5,000+ daily messages.
- Optimized internal dashboards for real-time visibility into loan status and repayments; supported production systems through incident investigation and resolution.
- Own end-to-end automation of PS Kit generation — template-driven document workflows with automated field mapping — reducing manual intervention and processing errors.

Tech stack: Python (Django), JavaScript, React, Celery, MySQL/PostgreSQL, OpenAI API (GPT-4.1), Microservices, REST APIs, Git.

ERP Platform (ERPNext/Frappe)

- Led an e-commerce platform migration ensuring feature parity and a 25% uptime improvement for 10,000+ users; extended ERPNext (Frappe) modules with reusable components for 50+ clients.
- Led an ERPNext version migration, resolving compatibility issues and stabilizing core modules; developed optimized SQL reports for stock, batch, and GST invoicing insights.

Tech stack: Python, Frappe (ERPNext), MariaDB, JavaScript, Git.

Software Engineer Trainee

Aug 2022 – Oct 2022

Volkswagen Group Technology Solutions India

Gurugram, India

- Completed structured training in Java programming (OOP, data structures, algorithms), building foundational knowledge applicable to enterprise-grade backend development.

IT Analyst Intern

Jan 2022 – Jul 2022

NCR Corporation

Gurugram, India

- Enhanced BMC Remedy ITSM modules for incident and service request management; customized automated workflows using forms, filters, and active links to streamline IT service operations.

EDUCATION

Bachelor of Technology, Information Technology

CGPA: 8.41/10

G.L. Bajaj Institute of Technology and Management, Greater Noida, India

ACHIEVEMENTS

- Star Performer Award — recognized for consistently exceeding targets and delivering high-impact contributions in a production engineering environment.
- Hackathon 2nd Prize — built a route optimization solution that boosted Sales & Collections team efficiency.
